

Abhiram Kurambhatti

Software Developer · Backend & AI Systems

+91-9552050093 | abhiramkurambhatti@gmail.com | linkedin.com/in/abhiram-kurambhatti-3a3a8b1aa | github.com/Abhiramkurambhatti

TECHNICAL SKILLS

Languages & Frameworks

Python Django FastAPI
Java React HTML/CSS/JS

AI & Machine Learning

LLMs Gen AI RAG
LangChain NLP AI Agents
FAISS ChromaDB
Prompt Eng.

AI Dev Tools

Cursor Claude Code MCP
Vibe Coding

Databases & Cloud

PostgreSQL MongoDB Redis
MySQL AWS EC2

Data & Analytics

Pandas NumPy Power BI
Tableau

DevOps & Tools

Docker Kubernetes Jenkins
Kestra Kafka Git JIRA

Architecture

Microservices REST APIs
CI/CD Event-Driven
System Design

EDUCATION

MIT World Peace University

B.Tech — Computer Science
2021 – 2024 | CGPA: 8.90 / 10.00

MIT World Peace University

Diploma — CS & Engineering
2018 – 2021 | CGPA: 9.04 / 10.00

PROFESSIONAL SUMMARY

Software Developer with hands-on experience building scalable backend systems, automation pipelines, and AI-powered applications. Proficient in Python (Django, FastAPI), microservices, and modern AI tooling including LLMs, RAG pipelines, and agent frameworks. Experienced in full-cycle development — from system design to cloud deployment — with a strong eye for clean architecture and measurable impact.

PROFESSIONAL EXPERIENCE

Amdocs

Nov 2024 – Present

Associate Software Developer

- Refactored a legacy ETL framework into a modular, containerised architecture using Python, Kestra, and Docker — improving pipeline maintainability and enabling horizontal scalability.
- Built a Kubernetes-deployed ticket automation system with FastAPI, achieving high availability and reducing manual triage effort across teams.
- Developed backend services for an SDLC Best Practices Dashboard and automated end-to-end data ingestion pipelines, cutting onboarding time for new data sources.
- Designed Power BI dashboards to surface real-time operational and system metrics, improving visibility for engineering and management stakeholders.
- Automated disaster recovery reporting pipelines, significantly reducing manual effort and improving incident response traceability.

Syngenta

Jan 2024 – Jul 2024

Software Engineering Intern

- Maintained and enhanced enterprise backend services built on Java and Spring Boot, contributing to performance and reliability of production systems.
- Designed and integrated RESTful APIs for internal services, enabling seamless cross-system data exchange.
- Debugged and optimised backend modules, resolving critical bottlenecks and improving overall application stability.

PROJECTS

B2B E-Commerce Platform — KlarTech — React, TypeScript, Firebase, Tailwind CSS

- Architected a full B2B product catalogue and RFQ platform for an authorised test & measurement distributor — featuring admin dashboard, XLS price-upload automation, wishlist-to-quotation flow, and CI/CD pipeline from Figma through Bolt, GitHub to Hostinger VPS.

AI-Powered Web Platform — Client Freelance — React, Vite, Claude API, MCP Integrations

- Converted a Figma prototype into a live client-facing website using AI-assisted workflows with Claude Code and MCP integrations, significantly reducing development cycle time.

Telecom Incident Analytics Dataset — Python, Pandas, NumPy

- Generated a 500-row synthetic telecom IT incident dataset with realistic ticket categories, identifiers, and SLA metadata for ML model training and dashboard prototyping.
